

Disease Resistance

Coronado Gold exhibits excellent disease resistance for premium turf performance throughout all areas of tall fescue adaptation. It has a 98% endophyte level for improved insect resistance and has a very good tolerance to brown patch.

Recommended Uses

With a uniform, dense turf providing dark green color, Coronado Gold is highly recommended for home lawns and professional turf applications, where a deep, infrequent irrigation can be maintained which promotes deep, healthy root systems.

Performance Characteristics

Tolerates full sun to moderate shade and demonstrates superior traffic and wear tolerance. Coronado Gold has an excellent overall performance in heat and humidity.

Mean Turfgrass	
NTEP 1997 – 2000 Data	
Name	Mean
Coronado Gold	5.6
Falcon II	5.6
Finelawn Petite	5.6
Shortstop II	5.5
